

## **BOIL WATER ADVISORY**

A boil water advisory is currently in place across the resort and will **CONTINUE** until further notice.

This advice has been issued due to maintenance activities in the reticulation system and water quality testing demonstrating that the water is not safe to drink.

Resamples and reticulation sluicing is being completed and further communication will be made once drinking water is safe for consumption.

Please follow the below guidelines.

To ensure your water is safe.

- Do not drink any unboiled water.
- Boil water in a kettle with an automatic cut-off or on the stove until it boils, with a rapid stream of air-bubbles forming from the bottom of the kettle or pan.
- Once you have boiled the water, allow it to cool.
- You can store it in the fridge in clean, closed containers for drinking or food preparation – you do not need to boil it again.
- Take care not to injure or scald yourself when you handle boiling water, especially around children.
- Boiled water can be used for:
  - drinking
  - preparing beverages
  - washing and preparing food
  - preparing baby formula
  - brushing teeth
  - making ice.
- Unboiled water can still be used for showering and bathing, washing your hands, flushing toilets, washing dishes and clothes. Ensure water is not ingested whilst bathing.

Consumption of unboiled water can cause gastro-like symptoms. If you experience any of these symptoms, please contact your GP and inform your GP of this advisory.

Drinking water is available at Village Central Restaurant.

We sincerely apologise for any inconvenience.
